SUT-500-S

ASSEMBLY REQUIREMENTS

*Torque all T-bolt nuts to 35-40 foot pounds.

*Check all lights before towing.

*Tire pressure not to exceed recommendation on serial tag.

*Re-torque wheel nuts after first 25 miles to 80 ft pounds and periodically thereafter.

Failure to follow the assembly instructions could result in serious injury or death.

Incorrect assembly or modifications to your trailer will void any specific or implied warranty.

For questions or assistance assembling your trailer call 800-282-5042.

UNPACK AND IDENTIFY THE FOLLOWING PARTS.
Tongue section and angle bracket for cross members.

Side Rails and cross members

Axle assembly, springs and U bolt hardware.
Fenders and tires

Rollers, winch post and braces.
Lights, brackets, harness, and hardware

Skid and side marker bracket
Tongue assembly

Unwrap the two tongue sections and loosen the nuts on the splice plates.

Slide splice plates over the adjacent tongue section until the plates are centered between the tongue sections.
Then tighten nuts.

Frame Assembly

Front of side rail
Triangle plate flush with side rail.

Rear cross member

Front cross member
Locate the front cross member and slide it into the front of the side rail.

Add the rear cross member to the side rail. Then attach the other side rail to the cross members.
Square the frame and tighten all the corner brackets.

Rear cross member

Your frame should look like this.
Once frame is squared up and nuts have been tightened, turn frame over. Then tighten nuts on the underside of the rail front and back as shown.

Frame Attachment
Locate the two angle brackets to install the frame to the tongue

Set the frame assembly on top of the tongue with the attaching brackets behind the cross members. Also make sure that there are 2 T-bolts between the brackets on each side of the tongue for the roller brackets.
Take the angle brackets and install them on the tongue and front and rear cross members. Line up the back edge of the brackets with the pencil marks on the tongue.

Line up the tongue with the pencil marks on the cross members.
Rear of tongue to rear side of cross member is 28”.

Your trailer should look like this at this point.

**Spring Installation**

Turn frame up side down to mount springs
Remove the bolt from the front spring eye and install the spring into the spring hanger in the center hole with the nut toward the inside of the trailer. Do not tighten yet.
Remove the two bolts from the shackle holder at the rear of the spring and install the shackle holder into the rear spring hanger with the nuts toward the inside of the trailer. These nuts can be tightened at this time.
Axle Installation

Locate the axle and install it on the springs as shown. Make sure the locating studs on the springs are in the holes on the axle’s spring seat. Face the axle’s serial plate toward the rear of the trailer to protect it from debris.

Locate the U-bolts and tie plates.
Install the U-bolts and tie plates as shown.

Install the nuts and tighten them evenly.
Go back and tighten all of the spring mounting nuts that were left loose previously.

On the rear shackle, do not over tighten as this will not allow the suspension to move properly.

Wiring
Locate harness and ring terminal.

Take the white ground wire and strip it and install ring terminal.
Locate the $\frac{3}{4}$” long Philips screw.

Install Philips screw through the ground wire into the pre-drilled hole located under the tongue just behind the coupler.
Extend a tape measure inside the tongue from the rear of the trailer until it protrudes at the front of the trailer under the coupler.

Attach both wires of the harness to the end of the tape measure with either tape or a tie. Retract the tape measure until it comes out the back of the tongue with both wires attached.
Tail light brackets, tail lights

Locate the tail light brackets.

Locate the tail lights, carriage bolts, nuts and license plate bracket.
Install the tail light brackets from the rear of the tongue as shown.

Position the tail light brackets 8” from the rear of the tongue.
The light with the yellow wires is for the left (driver’s side) of the trailer.

Slide the carriage bolts into the slots in the back of the tail lights.
Repeat the process for the right side as shown.

Install the left tail light with the license plate holder between the light and the bracket. Repeat for the other side. Then make sure to tighten nuts but don’t over tighten them.
Locate the black tab at the bottom of the tail light. Move the tab toward the rear of the trailer and pull down releasing the bulb assembly from the light housing.
Loosen the wire retaining screws and install the color matching wires from the wire harness onto the corresponding retaining screws.

Re-install the bulb assembly into the light housing making sure to route the wires through the slot in the base of the bulb assembly.
Install adhesive backed clamps in the locations shown and route the wires through them.

Running lights, bracket and skid.

Locate the two amber running lights, four small Philips screws, adhesive backed clamps, two ring terminals, and two blue connectors.
Cut approximately 8 ½” off of the white wires on both running lights. Strip 1/4” of insulation from the wire.
Install the ring terminals by crimping the terminal onto the bare wire.

Locate the skid and light bracket.
Take one T-bolt off the skid and slide it in the bottom of the tongue. Then install the bracket for the lights and position as shown.

Align the ring terminals with the screw hole nearest the wire on the back of the running light. Make sure the wire is routed through the gap on the back of the light so it does not become pinched when the light is installed.
Install the running lights into the pre-drilled holes in the running light bracket using a Philips screwdriver. Be sure the screw is through the ring terminal on the back side of the lights. This will supply a ground to the lights. **DO NOT OVER TIGHTEN**

Cut 6” off of the brown wire on the left (driver’s side) running light. **Do not strip the wire.**
Insert brown wire that has been cut into the hole in the connector closest to the hinge. This hole does not pass all the way through. The wire should go in about ½”. Pass the other wire through the remaining open slot in the connector at a point close to the running lights.

Use pliers to push the metal spade down until it is flush with the plastic. This is what makes the electrical connection between the two wires. Close the plastic cover of the connector over the spade until it snaps into position.
Cut the exposed strands of wire off of the end of the brown wire on the right (passenger side) running light. Measure 34” back from the front plug on the green/brown wire and pass the brown wire through the open slot in the second light blue connector at this location. The green wire will rest just outside the connector. Insert the brown wire from the running lights into the closed side of the connector and close the spade and cover as previously described. This will make the connection from the main harness to both running lights.
Locate the adhesive backed clamps. Install them as shown and run brown wire from the running lights through them.

Install the skid on the front tongue section now. Tighten the nuts for the skid in the location as shown.
Tape wiring as shown.
Fender Installation

Locate fenders, washers, T-bolts, and nuts.

Locate (2) 1 1/8” T-bolts from the hardware bag and install them into the side rails. Slide them into position over the tire and install two rubber washers and two steel washers as shown.
Install the fender, two more steel washers, and nuts, center the fender over the axle and tighten the nuts. Repeat for the other side.

Locate 8 lug nuts, and wheels.
Install the wheels with the valve stems facing out. Install the lug nuts with the tapered side facing the wheel.

Web strap clip installation

Locate 2 web strap clips
Install a web strap clip on each side rail at the back as shown. Then tighten nuts.

Padded cradle installation

Locate padded cradles, brackets, and hardware.
Locate the 4 angle brackets and repair T-bolts. Install the repair T-bolt on the short end of the angle as shown.

Install two of the angle brackets on the front cross member and two on the rear as shown.
Then slide T-bolt over on cross member and align them with the angle brackets.

Install cradle bracket onto T-bolts on the front and rear cross members. Then install a 1” bolt through the angle bracket at the bottom. Position brackets and then tighten nuts.
Take the nuts and lock washers off the bottom of the padded cradle and position it on top of the angle brackets.

Install the lock washers, and nuts then tighten. The padded cradle holder will have to be adjusted for the boat after the trailer is finished.
Locate the three rollers

Install the two front rollers aligned with the T-bolts on the tongue. With the roller bracket tilted, gradually pull it over to the other side and position it. Install nuts and tighten.
Slide the last roller bracket on over T-bolts and adjust. Install nuts and tighten.

**Winch post installation**

Locate winch post, and diagonal braces.
Install braces on the T-bolt at the front of the tongue section. Position braces and tighten nuts.

Install winch post by sliding it through the T-bolts on the braces.
Adjust the winch post and tighten nuts.

Torque lug nuts

Tighten to 80 foot pounds in a crossing pattern. Re-tighten after 25 miles.
Finished trailer
